Website building and ChatGPT connection

Website kis mein banegi?

ChatGPT complete HTML/CSS code likhega. App mein generated prompt milega. Aap ise ChatGPT mein bhejenge; uska poora HTML answer yahan paste karenge. App format validate karegi, preview dikhayegi aur index.html download degi. File ko browser mein kholne par website chalti hai.

Kya ChatGPT automatically connected hai?

Nahi. Open ChatGPT sirf browser tab kholta hai. App account login, prompts, scraping ya AI calls automatically perform nahi karti. Is manual edition mein API key ya AI CLI ki zaroorat nahi hai. Apne account ki available features aur limits ke andar use karein. Agar live search available nahi hai, verified listings manually add karein.

API automation ek alag integration hogi: configured backend, API key/access aur usage billing. Is follower ZIP mein wo included nahi hai. Official references: API setup and API pricing.

Pura practical workflow

1. ZIP extract karein. Node.js install ho to START WEBSITE LEAD.bat double-click karein. Open http://127.0.0.1:3000/.

2. ChatGPT apne browser mein sign in karein.

3. Find leads mein actual category/city bharein. Prompt copy → ChatGPT send → complete JSON copy → app paste → Validate & import answer.

4. Analyze aur Rank mein yehi handoff repeat karein.

5. Build website mein business choose karein, verified details/style enter karein. Copy website prompt → ChatGPT mein send.

6. ChatGPT ka COMPLETE answer <!doctype html> se </html> tak copy karein. Website HTML box mein paste → Validate & preview website.

7. Preview inspect karein → Download complete index.html. File ko browser mein open karein.

8. Download project se poora workspace JSON save karein. Import project isi saved work ko resume karta hai. Refresh/close se pehle save zaroor karein.

9. Outreach ka JSON import karke message review/copy karein aur khud send karein.

Already have a business? Find leads ke manual form mein add karein aur seedha Build website tab use karein. Analysis/ranking optional hain.

Demo aur output ki sachchai

Try complete fictional demo ek prewritten sample website, lead, analysis/ranking aur outreach kholta hai. Yeh live AI result nahi hai.

Output ek complete responsive STATIC website front end hai. Website ki quality AI answer par depend karti hai aur review zaroori hai. Payment, booking backend, database, login, forms aur hosting supplied nahi hain. Public website URL banana separate publishing step hai.

App ko followers ke saamne **free local website prompt + preview workspace with manual ChatGPT handoff** ke roop mein describe karein. Automatic AI website builder ya free unlimited connected AI ka claim na karein.

Problems and fixes

Empty lead array: confirm actual city/category and ask ChatGPT for its search limitation. Existing work is preserved. Partial HTML: ask for a shorter complete single-file website, then paste it again. Port busy: use the running app or stop the conflicting app. Node missing: install Node.js LTS. Keep all extracted files including demo.js and assets. Keep launcher terminal open while using the app. Ctrl+C stops it.
